

# Cleaners, Sealers, and Coatings to maintain the look you want

## Concrete Densifier

4 x 1 Gallon

Densifiers are a complicated mix of specially engineered inorganic soluble silicates. Applied to concrete the silicates react with the calcium hydroxide in the concrete reducing the absorption properties of the concrete creating a harder surface resulting in increased “polished life” of the floor. Unlike normal sealers that are worn away over time and traffic, Densifiers protect the surface and will not peel off or wear away. Densifiers reduce porosity, increases hardness, stabilizes, protects, increases floor life and is easy to apply.

To apply, clean and dry your surface. Do not dilute, Densifiers should be used at full strength. Densifiers can be applied with a broom, mop, roller or pump sprayer. Apply to the floor heavily leaving puddles. Squeegee, brush or vacuum off excess product. Let Dry 1-12 hours. Do not rinse or allow any water on the surface for 48 hours. Coverage 600-1000 ft. per gallon. Concrete treated with Densifiers can be polished with diamonds to get that “wet look” finish.

## RINO HIDE

### For the Polished Concrete “Look”

4 Gallons per case  
L7010

Developed specifically for the polished concrete “look”. Start with 100 grit resin diamonds and proceed with 200 grit up to 400 grit. The floor is now ready for Rino Hide.

Rino Hide is a urethane/prepolymer penetrating sealer that hardens to a clear high gloss film, applied to the floor and burnished in (175 RPM with Hoggs Hair pad), saving the customer 50-60% off the cost of a full polish. This task only takes a few hours to complete.

Rino Hide covers approximately 800 sq. ft. per gallon. Normally 2 coats are required to seal the floor, eliminating dusting and reducing cleanup time. Cures to touch in 2 hours and fully cures in 12 hours. Outstanding chemical resistance and good flexibility.

## TRIPLE ACTION CLEANER

4 x 1 Gallon between grits, daily or weekly maintenance or prior to recoating on a coated floor.

This is a special cleaner that emulsifies oils and increases gloss, minimizes scratches and lubricates any pads. Great cleaner for

## “FINAL STEP” Stone Polish

MCS200-5 5 Lbs.  
MCS200-25 25 Lbs.

MCS is the final step to quickly bring out the aggregate by creating a very high gloss on finished concrete, stone or finished marble (except green). MCS fills the pores forming a guard against oil, grease, water and common dirt. Consisting of high quality abrasives and special buffering agents reducing etching and increasing performance. Removes fine scratches caused by wear and tear and is not a surface coating that needs to be reapplied constantly to maintain the finish. Easy to apply with a buffing pad in 25 sq. ft. sections. Buff with floor machine until you get the desired finish and squeegee excess to next area and repeat adding water and MCS as necessary. Wet vacuum slurry until most is removed and buff with a Reflexon 202 pad.
