

SAND SCREENS

SAND SCREENS by *Diamond Back* are the best you can buy. **Silicon Carbide** fractures with minimum pressure & heat, this produces a consistent fine sanded floor. **Sand Screens** are used in the final phase of floor sanding by removing raised grain & cleaning up the picture frame effect left by belt or drum sanders & edgers. **Sand Screens** stay sharp until the mineral is completely utilized. **The mineral is closely graded & bonded on both sides of the mesh to ensure consistency with no clogged screen holes.** **Sand Screens** can be used wet or dry from **178-330 rpm**. **Sand Screens** cut flatter & more aggressively when on a thin **FINISHRITE PAD**. A 1" thick **REFLEXON** Pad will cut less aggressively & follow the contour of the floor sometimes removing soft grain.

AVAILABLE IN 60, 80, 100, 120, 150, 180, 220 GRIT

SIZE	PART#	QTY	SIZE	PART#	QTY
