

# BETWEEN COATS ABRADING

120, 180, 240, 320, 400 GRIT

**FINISHRITE ROLLS** can be used for fine sanding or between coats utilizing an maroon pad and PSA Finishrite Roll abrasives that can be applied in many configurations. Abrades finish and removes grain raise without removing the finish.

Grits are available in 120 to 400.

- Reduces swirl marks and picture framing
- Works well on flat or uneven surfaces
- Variety of grits are perfect for recoat jobs
- Better finish appearance and depth
- Less finish removal and swirl marks than screens
- **120 Grit** - Creates a fine finish on raw wood
- **180 Grit** - Used between coats of oil or poly for abrading or after first seal coat.
- **240 Grit** - Used to cut down grain raises prior to the final coat.
- **320-400 Grit** - Used for ultra fine finish with water finish

**FINISHRITE PADS** contains a light abrasive 360 grit designed to recondition Wood Floors, Stone, Marble Tiles & concrete prior to re coating, or between coats to improve adhesive between coats; or to remove any contaminates in the previous finish. **FINISHRITE PADS** are also widely used in the final sanding procedure after water popping to give the floor that smooth /deep finish. Excellent between coats of water base finishes to remove grain raise. (The addition of **FINISHRITE ROLLS** or strips are sometimes necessary to ensure a perfect finish.)

EXAMPLE - Between Coat: Oil 180 grit, Abrasive, Water 220 grit. After sanding Wood Floor 120 grit to remove scratches or swirl marks. On Stone or Marble to remove top coat of protective finish prior to re-coat. Remove scratches in Marble/Stone 180-400 grit.

3/8" THICK PAD MAROON PAD 360 GRIT 10/BOX

● RE-FIN (SIZE)
