

Nu✓oFLEX's vertical presentation permits access to areas traditional tools can't reach. The extended low profile easily passes under cabinets, shelves and chairs. It also passes into tight spaces between walls, cabinets, desks, chairs and tables, eliminating the need to move furnishing. The tapered profile finds its way under and around electrical, computer, and telephone cords under desks. The patented design allows for an ergonomically comfortable standing position as one cleans, reducing back strain while increasing productivity three fold.

Covers open areas faster than traditional tools by increasing the width of the surface addressed in a single pass. In a typical office one can stand comfortably in the center of a room and easily clean the whole space by simply turning to the area needing attention. In addition to the floor space covered in a single pass, the flexible neck keeps the tool paralleled to the surface as one reaches forward to clean under desks or furnishings. Nu✓oFLEX tools are as effective in the warehouse and production area as they are in the home or office. They are great in and around workstations and production lines.

Reaches well under the desk while the user stands comfortably upright.

Gets those tight spaces that ordinary tools can't reach!

Fast, efficient cleaning of hardwood, marble and stone floors.

NEW

PERFECT FOR BACKPACKS & CANISTER VACUUMS

The patented tool series was developed by a contract cleaner seeking to increase his associates' productivity by changing from the traditional "push-pull" motion utilized with conventional tools to a vertical design which accomodates sweeping in an arc similar to mopping. The flexible neck permits the tool to find the surface being cleaned regardless of the angle.

Nu✓oFLEX neck permits the tool to find and track the surface as the tool is moved up, down, or across a wall. The horsehair brush is gentle on surfaces and reaches into tight spaces for effective dusting.
